

Every IV fluid decision matters

Make the right decision when prescribing, administering and monitoring intravenous (IV) fluids

START

the right IV fluid
only when indicated

STOP

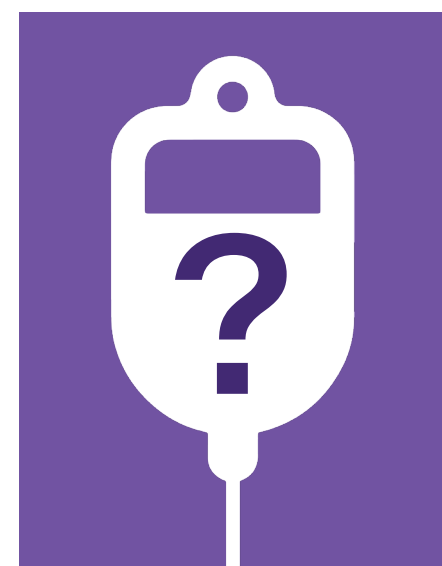

as soon as no
longer required

SWITCH

to oral therapy as
soon as appropriate

Before initiating, re-ordering
or hanging an IV fluid bag, ask:

**Does my patient
need IV fluids?**

Australian
Commission on
Safety and Quality
in Health Care

Scan for guidance on
safe, appropriate and
sustainable IV fluid use
