# Pharmaceutical Reforms

- > PBS
- > APAC guiding principles
  - Guidance and strategies for preventing medication errors at transitions across care settings
- > Medication reconciliation activities underpin many of the principles

Pharmaceutical Reforms

Now it's easier and safer to access the medicines you need

The State and Commonwealth Governments are making changes in public hospitals so it's easier and safer to access the medicines you need:

**Better access**

- > Using the Pharmaceutical Benefits Scheme (PBS) for discharge and outpatient prescriptions.
- > Hospital pharmacies can dispense these prescriptions.

**Expert advice**

- > When you are in hospital, you can discuss your medicines with a pharmacist.

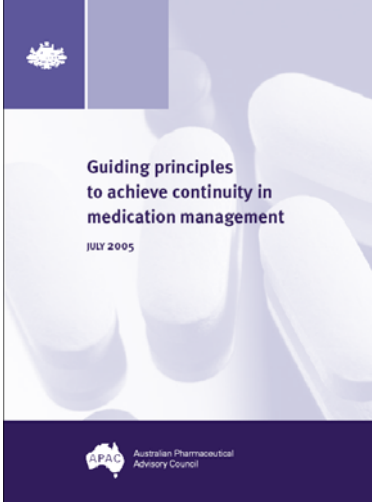

**You will need to bring to hospital:**

- > Your Medicare card and any Concession cards you have
- > The medicines you are taking and your current medicines list (including over-the-counter and herbal)

**Talk to your hospital pharmacist or doctor for more information.**

**Guiding principles  
to achieve continuity in  
medication management**

JULY 2005

**APAC** Australian Pharmaceutical  
Advisory Council

# APAC guiding principles and medication reconciliation

1. Leadership
2. Responsibility
3. Accountability

9. Communicating medicines information

10. Evaluation

Admission to next episode

Discharge to next episode

Current episode of care

During episode

4. Accurate medication history
5. Medication review & reconciliation
6. Medication action plan
7. Medicines information to consumers
8. Ongoing access to medicines (discharge reconciliation)

# Prior to the Reforms....

## > Medication histories

- often incomplete or incorrect
- used to commence treatment for the patient
- no standard location and multiple variable medication histories throughout the notes

## > Medication action plan

- Documentation of interventions and changes to therapy difficult to find in notes, if done...

## > Discharge

- Ad hoc pharmacy discharge reconciliation
- Local hospital data
  - 3 errors per discharge prescription<sup>1</sup>
  - 3 to 6 errors per discharge summary<sup>1,2</sup>

<sup>1</sup> Wallace C *et al.* RAH review 2007

<sup>2</sup> Tan D *et al.* RAH review 2005

# Implementing APAC

- > Supported by new pharmacist FTE
  - Based on SHPA clinical pharmacy ratios
  - Staged recruitment of 76 FTE across 6 metro hospitals
  - Includes ED coverage
- > ↑ pharmacy trainee positions
- > Note: existing clinical pharmacy service
  - Very low FTEs (1 per 100beds)
  - No ED pharmacy services
  - No standard service
  - No measurement

## 2007 New Pharmacists

<b>Hospital</b>	<b>FTE</b>	<b>APAC focus</b>
RAH	5	ED, Pre-admission
FMC	3	Ward- based clinical services
TQEH	2	ED, discharge
RGH	2	Pre-admission, Acute Referral Unit
WCH	1	Discharge
LMH	1	ED, medical team

# APAC Working Group

- > Multidisciplinary
  - pharmacy, medical, nursing
- > Review guiding principles
  - Application to hospital practice
- Evaluation
  - KPI development
- SA Handbook
  - “The how to”, tools, guidelines etc

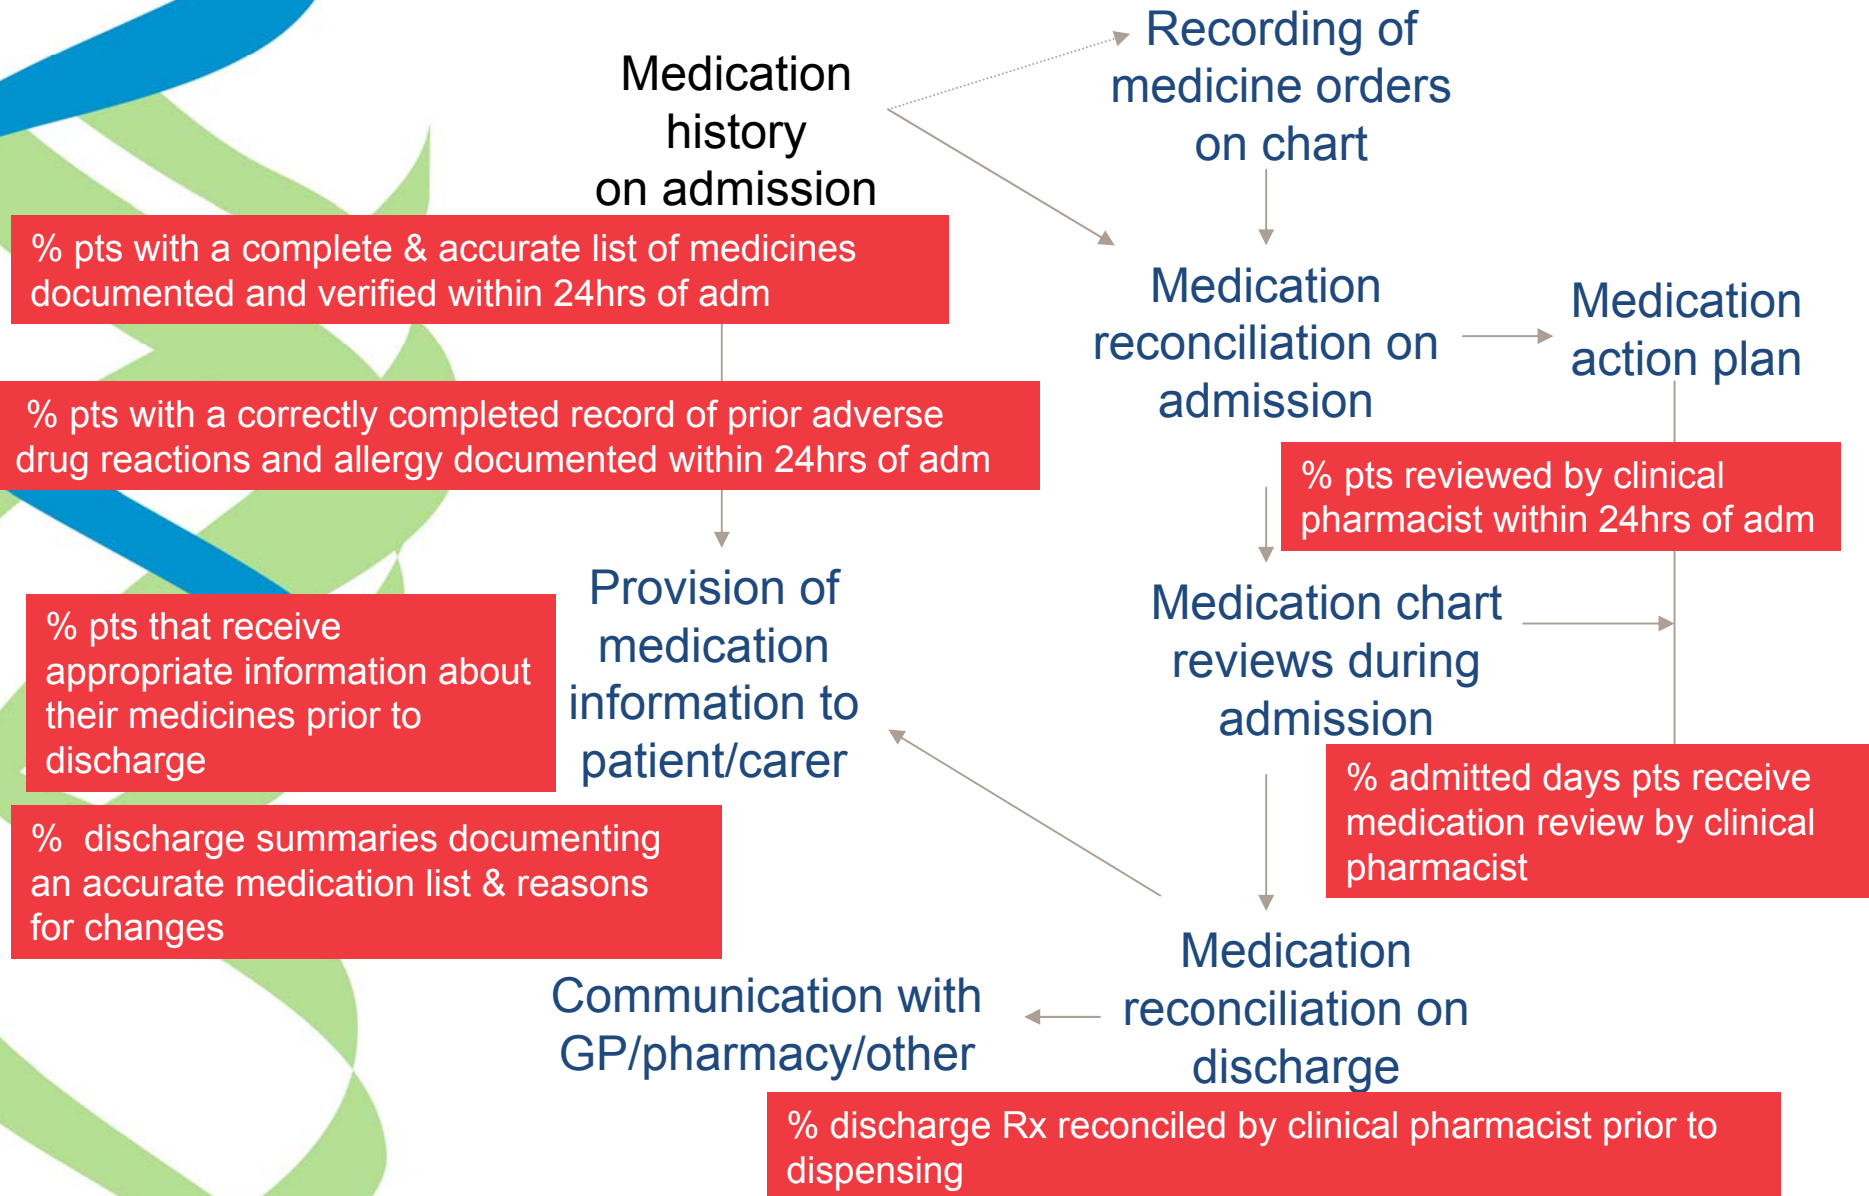

# Measuring APAC

- > 21 key performance indicators
  - 12 clinical activity (6 med rec)
  - 9 policy
  - detailed definitions and measurement
  - based on existing indicator sets eg NSWTAG, SHPA
- > Baseline data collection
  - existing data eg NIMC audits
  - targeted reviews
- > Approved by CEO & regional executives Scope

# Medication Reconciliation and APAC

## APAC 4.2

Percentage of inpatients that have a complete and accurate list of their current medications (including over-the-counter and complementary medications) documented and reconciled within a day of admission

### Purpose:

To assess the number of patients that have a complete and accurate medication history documented within a day of admission to hospital – to measure the effectiveness of processes that promote continuity of care in medication management.

### Background and evidence:

Adverse drug events (ADEs) are commonly caused by lack of effective communication, especially in the transition between the community and hospital setting.<sup>1</sup> A complete and accurate medication history ensures continuity in medication management – an Australian Pharmaceutical Advisory Council guiding principle.<sup>2</sup> Documenting and verifying the medication history as early as possible in the episode of care avoids duplication of recording and potential discrepancies.<sup>2</sup>

### Key Definitions:

A complete and accurate medication history means a list of current medications including prescription and over-the-counter medications, and complementary health care products.<sup>2</sup>

Documenting a complete and accurate medication history involves:

1. **Obtaining a list of current medications:** A formal interview is conducted at admission to document a complete and accurate list of each patient's current home medications (what they are taking prior to admission). The information for each medication on the list should include:
  - medicine (active ingredient name and/or brand name, strength, dose form where relevant);
  - dose, route and administration frequency (as actually taken by the consumer);
  - recently changed/ ceased medicines
  - adverse drug events/ allergies.<sup>2</sup> and
  - where relevant: when started/duration of therapy, action/indication (as reported by the consumer)
2. **Verifying the list of current medications:** Seeking to confirm with at least a second source that the information obtained at interview is supported. Details can be confirmed by caregivers, general practitioners, community pharmacies, aged care facilities or by physically reviewing the patient's medications.
3. **Recording the date and time of documentation and the name of the person that recorded the history.<sup>2</sup>**

Within a day of admission means by the end of the next calendar day.

### Data collection:

*Sample selection:* A random sample of patient records involving patient stay longer than 24 hours

*Suggested sample size:* Random sample of 10% of bed numbers. (Minimum 10).

*Methodology:* Review medical record for documentation regarding current medication list, confirmation of medication list and date of documentation.

### Calculating the indicator:

$$\frac{\text{Numerator}}{\text{Denominator}} \times 100\%$$

**Numerator** = Number of inpatients who have a complete and accurate list of their current medications (including over-the-counter and complementary medications) documented and reconciled within a day of admission

**Denominator** = Number of records in sample

### References:

2. Guiding principles to achieve continuity in medication management: Australian Pharmaceutical Advisory Council, 2005:1-55.

# Results – Principle 4

SA APAC 4.2:

Percentage of inpatients that have a complete and accurate list of their current medications (including OTC and complementary) documented and verified within a day of admission

## 4.2 Complete & Accurate Med History within 24 hrs

SA APAC 4.3:

Percentage of inpatients that has a correctly completed record of prior ADR and allergy documented within a day of admission

## 4.3 ADR Documented within 24 hours

# Medication History ....wins

- > Histories accurate, verified
- > Not just a list....
  - Medication review
  - Management issues
  - ...starts the action plan
- > Engaging patients and carers in medication management
- > Standardises documentation and location
  - Form stored in front of active medication chart
  - Becomes part of the patient's medical record
- > Becoming the source – referred to by all practitioners
  - On admission, transfer and discharge
  - Medical staff support, referrals

# Results – Principle 5

## SA APAC 5.2:

The percentage of patients reviewed by a pharmacist within 24 hours of admission

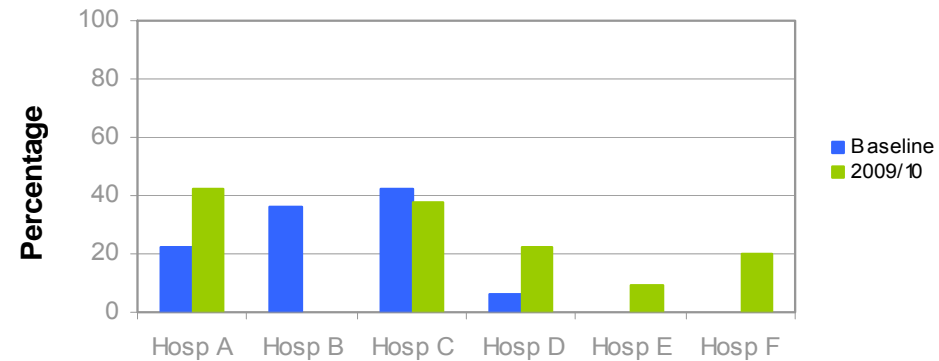

### 5.2 Pharmacist Review within 24 hours

## SA APAC 5.3:

The percentage of admitted days that patients receive medication review by a pharmacist

### 5.3 Daily clinical review per patient

# Medication Reconciliation ....wins

- > More efficient for prescribers to write up meds when accurate history available
  - Reduced unintentional discrepancies
- > More efficient for ward pharmacists to undertake medication reconciliation if history available from ED /POAC
- > Earlier resolution of medication management issues
- > Planning for discharge eg warfarin counselling

# Results – Principle 8

SA APAC 8.2:

The percentage of discharge prescriptions reviewed and reconciled by a pharmacist prior to dispensing

## 8.2 Discharge Prescription Review & Reconciliation

Patient or pharmacist copy

# Discharge Reconciliation ....wins

- > Patients being supplied with correct medications
- > Patients being supplied with required medications only
  - Reduced costs and risks of medication mismanagement
- > Active participants in care
- > Reduced workload for dispensaries
- > Improved discharge times

# Impact of discharge reconciliation

- > Items requested by doctor compared to those required after pharmacist reconciliation

Date	Rx	Items	Meds removed	Meds added	Reduction in meds for supply
Jan 08	53	324	119 (36.7%)	11 (5.0%)	33.3%
Feb 08	86	621	245 (39.5%)	14 (3.6%)	37.2%
Total	139	945	364 (38.5%)	25 (4.1%)	35.9%

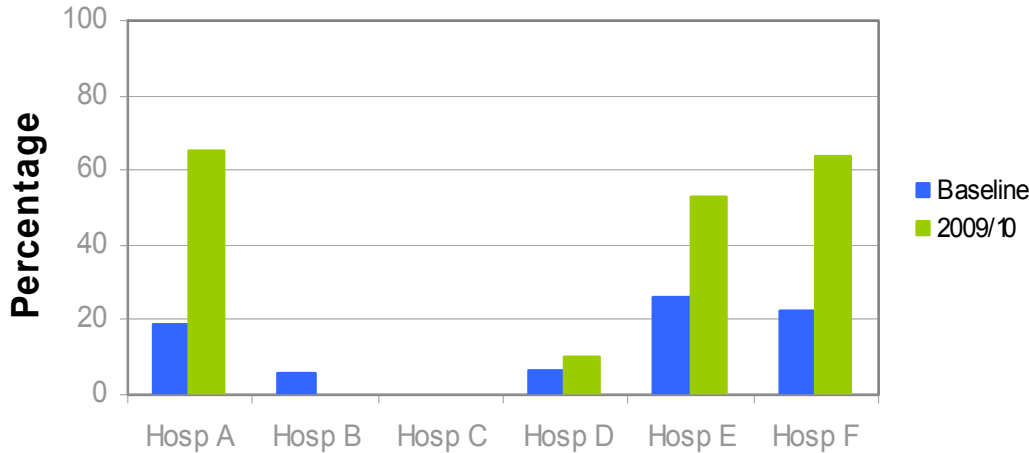

# Results – Principle 9

SA APAC 9.2:

The percentage of discharge summaries that document an accurate medication list and the reasons for all medication therapy changes from medications taken prior to admission

## 9.2 Accurate discharge summaries

Government of South Australia SA Health		PATIENT IDENTIFICATION

<b>Clinical Synopsis</b>			
<p>77 yo lady presented with central chest pain which gradually resolved within one hour. Pain felt like indigestion but was also similar to the separation prior to her 2004 CABG. She is not on regular aspirin. Her husband took her pulse and said it felt irregular. On examination, vitals were normal, pulse regular. Other examinations normal. ECG normal ECG.</p> <p>Bloods: CBC showed chronic anaemia (Hb 101)          HbA1c: 8.0%          Serial Troponin: &lt;0.02, CK not raised.</p> <p>She was started on regular pantoprazole and is now pain free. Serial ECGs show no further changes and she was discharged with advice to continue with Aspirin 75mg.</p>			
<b>Selected Investigations</b>
