

## On the Radar

Issue 248

9 November 2015

*On the Radar* is a summary of some of the recent publications in the areas of safety and quality in health care. Inclusion in this document is not an endorsement or recommendation of any publication or provider. Access to particular documents may depend on whether they are Open Access or not, and/or your individual or institutional access to subscription sites/services. Material that may require subscription is included as it is considered relevant.

*On the Radar* is available online, via email or as a PDF document from <http://www.safetyandquality.gov.au/publications-resources/on-the-radar/>

If you would like to receive *On the Radar* via email, you can subscribe on our website <http://www.safetyandquality.gov.au/> or by emailing us at [mail@safetyandquality.gov.au](mailto:mail@safetyandquality.gov.au). You can also send feedback and comments to [mail@safetyandquality.gov.au](mailto:mail@safetyandquality.gov.au).

### Reports

*Rapid Diagnostics: Stopping unnecessary use of antibiotics*

Review on Antimicrobial Resistance

London: Review on Antimicrobial Resistance; 2015. p. 39.

URL	<a href="http://amr-review.org/">http://amr-review.org/</a>
Notes	The UK's Review on Antimicrobial Resistance committee have published their latest report. This report provides an overview of how diagnostics can play an important role in the fight against antimicrobial resistance, by reducing unnecessary use, particularly outside of hospital usage. In many hospital settings the use of antimicrobial stewardship systems has allowed for more appropriate use of antibiotics. This report suggests that better and more rapid diagnostics can also aid in the more appropriate and targeted use of antimicrobials.

For information on the Commission's work on antimicrobial use and resistance, see <http://www.safetyandquality.gov.au/national-priorities/amr-and-au-surveillance-project/>

## Journal articles

### *10 new rules to accelerate healthcare redesign*

Loehrer S, Feeley D, Berwick DM

Healthcare Executive. 2015;30(6):66-9.

URL	<a href="http://www.ihl.org/resources/Pages/Publications/10NewRulesAccelerateHealthcareRedesign.aspx">http://www.ihl.org/resources/Pages/Publications/10NewRulesAccelerateHealthcareRedesign.aspx</a>
Notes	<p>The (US) Institute for Healthcare Improvement have made this article written by three of their senior staff available on their site. The article describes ten "new rules" that were developed and are being tested by members of the IHI Leadership Alliance as a set of guiding principles to help accelerate their progress toward delivering on the full promise of the Triple Aim (simultaneously improving the health of the population, enhancing the experience and outcomes of the patient, and reducing per capita cost of care for the benefit of communities).</p> <p>The suggested rules are:</p> <ol style="list-style-type: none"> <li>1. Change the balance of power</li> <li>2. Standardize what makes sense</li> <li>3. Customize to the individual</li> <li>4. Promote well-being</li> <li>5. Create joy in work</li> <li>6. Make it easy</li> <li>7. Move knowledge, not people</li> <li>8. Collaborate and cooperate</li> <li>9. Assume abundance</li> <li>10. Return the money.</li> </ol> <p>The article also briefly describes three case studies. The authors also warn that “comprehensive, radical redesign...is not for the timid” and that “Leaders need to be generous with power, seeking to uncover the assets and ambitions of their staff, patients and communities. Leaders need to be curious, eager to seek assistance from others outside their organizations and even outside the healthcare field. And they need to be courageous, committed to finding and testing new ideas and welcoming of not only successes but also failures, which can provide badly needed insights for course corrections and next steps.”</p>

### *Consumer participation in early detection of the deteriorating patient and call activation to rapid response systems: a literature review*

Vorwerk J, King L

Journal of Clinical Nursing. 2015 [epub].

DOI	<a href="http://dx.doi.org/10.1111/jocn.12977">http://dx.doi.org/10.1111/jocn.12977</a>
Notes	<p>The value and utility of rapid response teams (RRT) or medical emergency teams (MET) has been examined in recent years. This paper reviewed that literature (11 studies published in 2006–2014) focusing on the role of consumers (patients, families, etc.). The review found that consumer education programs for team activation led to more rapid response/medical emergency calls by both consumers and clinicians and was associated with decreased rates of patient mortality.</p>

For information on the Commission’s work on recognising and responding to clinical deterioration, see <http://www.safetyandquality.gov.au/our-work/recognising-and-responding-to-clinical-deterioration/>

*Six habits to enhance MET performance under stress: A discussion paper reviewing team mechanisms for improved patient outcomes*

Fein EC, Mackie B, Chernyak-Hai L, O’Quinn CRV, Ahmed E  
 Australian Critical Care [epub].

DOI	<a href="http://dx.doi.org/10.1016/j.aucc.2015.07.006">http://dx.doi.org/10.1016/j.aucc.2015.07.006</a>
Notes	This (Australian) paper also looks at the MET/RRT, but this time focuses on the team itself and how a ‘shared mental model’ and team development can affect performance and outcomes. From their experience of developing and using a model decision making the authors offer recommendations aimed at enhancing MET decision making under stress.

*Delayed Rapid Response Team Activation Is Associated With Increased Hospital Mortality, Morbidity, and Length of Stay in a Tertiary Care Institution*

Barwise A, Thongprayoon C, Gajic O, Jensen J, Herasevich V, Pickering BW  
 Critical Care Medicine. 2015 [epub].

DOI	<a href="http://dx.doi.org/10.1097/CCM.0000000000001346">http://dx.doi.org/10.1097/CCM.0000000000001346</a>
Notes	A further paper on rapid response systems. In this study examining all rapid response team activations in 2012 in a US teaching hospital covering 1725 adult patients. Patients were considered to have a delayed rapid response team activation if more than 1 hour passed between the first appearance in the record of an abnormal vital sign meeting rapid response team criteria and the activation of an rapid response team. 57% of patients had a delayed activation and those with delay had a higher proportion of calls between midnight and 08:00. The delayed group had higher hospital mortality (15% vs 8%); 30-day mortality (20% vs 13%); and hospital length of stay (7 vs 6 d) compared with the no-delay group.

*Partnering with Parents and Families to Provide Safer Care: Seeing and Achieving Safer Care through the Lens of Patients and Families*

Micalizzi D, Dahlborg T, Zhu H  
 Current Treatment Options in Pediatrics. 2015 2015/10/15:1-11.

URL	<a href="http://dx.doi.org/10.1007/s40746-015-0034-4">http://dx.doi.org/10.1007/s40746-015-0034-4</a>
Notes	This piece discusses the need for and the difficulties in achieving patient-centred care, particularly in the paediatric setting. The authors describe a number of case studies, the various relationships involve across and within clinicians, clinical teams, patients and their families, and some of the lessons learned from their experiences. They also touch on some less discussed aspects, such as communicating with adolescents, bereavement and after-care. The authors see patient-centredness as enhancing the care experience in various ways: “Clinicians who demonstrate a family-centered approach to medical care are better positioned to create empathetic and collaborative partnerships. Using the lens of quality improvement will lead to improved medical outcomes, increased patient safety, and a decrease in the emotional detachment of the care team. As we become a more open medical community, the rewards for the children will be unparalleled, and we will reinforce the reason why we selected health care as our career”

For information on the Commission’s work on patient and consumer centred care, see <http://www.safetyandquality.gov.au/our-work/patient-and-consumer-centred-care/>

*A Difference-in-Difference Analysis of Changes in Quality, Utilization and Cost Following the Colorado Multi-Payer Patient-Centered Medical Home Pilot*

Rosenthal M, Alidina S, Friedberg M, Singer S, Eastman D, Li Z, et al.

Journal of General Internal Medicine. 2015 [epub]

DOI	<a href="http://dx.doi.org/10.1007/s11606-015-3521-1">http://dx.doi.org/10.1007/s11606-015-3521-1</a>
Notes	This paper is an evaluation of a patient-centred medical home initiative involving 15 practices and 98,000 patients in the US state of Colorado. The evaluation found sustained reductions in hospital admissions and emergency department use (1.6 fewer ED visits per thousand member-months, or a 9.3 percent drop from baseline) over three years. However, quality-of-care results were varied, including cervical cancer screening rates improving but colon cancer screenings and haemoglobin testing for diabetes patients decreased.

*Identifying priorities for improved child healthcare: A mixed methods analysis of safety incident reports*

Rees P, Edwards A, Powell C, Williams H, Hibbert P, Makeham M, et al

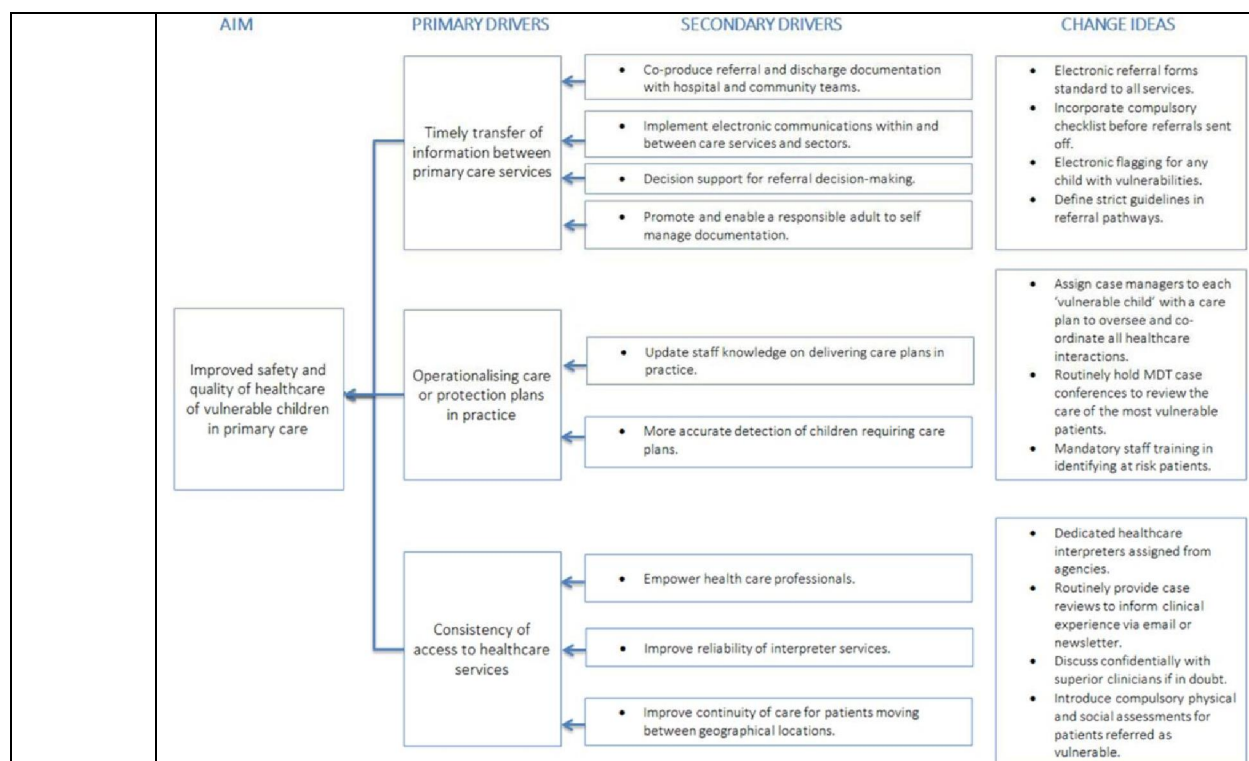

BMJ Quality & Safety. 2015 November 1, 2015;24(11):730-1.

*Vulnerable children and their care quality issues: A descriptive analysis of a national database*

Omar A, Rees P, Evans HP, Williams H, Cooper A, Bannerjee S, et al

BMJ Quality & Safety. 2015 November 1, 2015;24(11):732-3.

DOIs	Rees et al <a href="http://dx.doi.org/10.1136/bmjqs-2015-IHIabstracts.16">http://dx.doi.org/10.1136/bmjqs-2015-IHIabstracts.16</a> Omar et al <a href="http://dx.doi.org/10.1136/bmjqs-2015-IHIabstracts.18">http://dx.doi.org/10.1136/bmjqs-2015-IHIabstracts.18</a>
Notes	<p>A pair of abstracts published in the <i>BMJ Quality and Safety</i> for the IHI meeting that differ from most abstracts in that they contain some specific content. In this instance they contain figures demonstrating how safety incident report data can be used to inform the production of priority driver diagrams. They also describe other improvement tools to illustrate findings from the data, including Ishikawa diagrams. These come from a UK project using a national database on children and healthcare incidents.</p>

Notes	<p><i>International Journal for Quality in Health Care</i> has published a number of ‘online first’ articles, including:</p> <ul style="list-style-type: none"> <li>• <b>Health information technology</b> and team work to improve health care (Usman Iqbal, Shabbir Syed-Abdul, and Yu-Chuan (Jack) Li)</li> </ul>

## Online resources

### *Medical Devices Safety Update*

Volume 3, Number 6, November 2015

<http://www.tga.gov.au/publication-issue/medical-devices-safety-update-volume-3-number-6-november-2015>

The Therapeutic Goods Administration (TGA) has released the latest edition of its medical device safety bulletin. Topics covered in this issue include:

- **Joint registry data** offers insight into Australian orthopaedic implants
- **Reprocessing issues** – health professionals are reminded of the need to ensure proper processes are followed when reprocessing (i.e. cleaning and sterilising) equipment used in operating rooms.
- **‘Mild’ hyperbaric chambers** cancelled after advertising complaints – public complaints about therapeutic goods advertising can trigger a TGA investigation leading to their cancellation.
- Recent **safety alerts**

### *[UK] NICE Guidelines and Quality Standards*

<http://www.nice.org.uk>

The UK’s National Institute for Health and Care Excellence (NICE) has published new (or updated) guidelines and quality standards. The latest updates are:

- NICE Guideline NG22 **Older people with social care needs and multiple long-term conditions** <http://www.nice.org.uk/guidance/ng22>
