New resources to guide post-sepsis care and survivor support

<https://www.safetyandquality.gov.au/our-work/national-sepsis-program>

The Australian Commission on Safety and Quality in Health Care has released four new resources to help health services address gaps and inconsistencies in care coordination and post-sepsis support for survivors, families, carers and those bereaved by sepsis. Developed as part of the [National Sepsis Program](#), these resources aim to improve care delivery and ensure patients receive consistent, high-quality support throughout the sepsis journey.

These resources include:

- *Coordination of care and post-sepsis support - Model of Care Framework* – outlining the essential elements for effective sepsis care and follow-up support
<https://www.safetyandquality.gov.au/publications-and-resources/resource-library/coordination-care-and-post-sepsis-support-model-care-framework>
- *Coordination of care and post-sepsis support - Business Case* – supporting investment in coordinated care and post-sepsis services
<https://www.safetyandquality.gov.au/publications-and-resources/resource-library/coordination-care-and-post-sepsis-support-business-case>
- *Coordination of care and post-sepsis support - Supporting evidence and implementation ideas* – offering practical steps for applying the framework in different healthcare settings.
<https://www.safetyandquality.gov.au/publications-and-resources/resource-library/coordination-care-and-post-sepsis-support-supporting-evidence-and-implementation-ideas>
- *Coordination of care and post-sepsis support - Interactive PDF*– an interactive tool developed to help health services explore how these elements can be adapted for local settings
<https://www.safetyandquality.gov.au/publications-and-resources/resource-library/coordination-care-and-post-sepsis-support-interactive-pdf>

These resources align closely with the [Sepsis Clinical Care Standard](#) and particularly support the implementation Quality Statements 4 to 7.

Benefits and challenges of implementing statutory duty of candour in Victoria, Australia: a mixed methods analysis of healthcare provider perspectives

Harrison R, Adams C, Walsan R, Manias E, Chauhan A, Youngs N, et al.

Frontiers in Health Services. 2025;5.

DOI	https://doi.org/10.3389/frhs.2025.1669958
Notes	<p>Paper reporting on the impacts of introducing the Statutory Duty of Candour in Victoria. The authors note that ‘Statutory duty of candour (SDC) requires healthcare services by law to provide the patient or their family or carer who experiences a serious adverse patient safety event (SAPSE) with a written account of the facts, an apology, and the steps being taken to prevent reoccurrence.’ This paper draws on survey responses and interviews of health service staff working in Victorian health settings in order to examine staff and service delivery impacts of SDC.</p> <p>The authors report that ‘Implementing SDC has contributed to greater structure, consistency and routine inclusion of patient and family perspectives when examining patient safety events. Opportunities for improvement identified by respondents and interviewees included developing person-centered and context-sensitive timeframes for communication, relaxing legalistic documentation requirements, findings ways to more consistently apply SAPSE definitions, and addressing the cultural implications and administrative burden of SDC requirements.’</p>

From words to action: time for Australia to take shared decision making implementation seriously
 Hoffmann TC, McCaffery KJ, Légaré F, Bakhit M, Tracy M
 Medical Journal of Australia. 2025.

DOI	https://doi.org/10.5694/mja2.70065
Notes	This paper in the <i>Medical Journal of Australia</i> describes how shared decision making has been adopted in Australia, including the Commission’s engagement in this area. The authors observe that ‘Shared decision making is a process of engagement and partnership between a patient and their clinician that enables a collaborative decision to be made based on the best evidence, individual circumstances, and what matters most to the patient. Patient involvement in making informed health decisions is a fundamental right and is central to safe and quality health care. Shared decision making represents the highest standard of informed consent and is a cornerstone of value-based health care.’ However, the aim of this piece is to call for greater adoption and ‘urgent scaling up so that more individuals and the health system can benefit from it.’

Does policy and practice for peripheral intravenous catheters match clinical standards? A point prevalence study
 Lovegrove J, Havers S, Schults J, Ray-Barruel G, Bhasale A, Keogh S, et al
 Infection, Disease & Health. 2025.

DOI	https://doi.org/10.1016/j.idh.2025.09.004
Notes	This study assessed the implementation of the Management of Peripheral Intravenous Catheters Clinical Care Standard (PIVC Clinical Care Standard) in 134 acute hospital wards in Queensland. Assessment of the indicators in a point prevalence study found varying adherence and room for improvement. While 91% of PIVS had been used since insertion, only 70% had been inserted on first attempt and only 42% had documented PIVC inspections 8-hourly. The authors observe that ‘Reform of local guidelines, policies, and processes to standardise PIVC care across hospitals and strategies to improve Standard adherence are needed’

It is intended to inspire healthcare professionals, patients and care partners to be proactive about patient safety.

Infection prevention and control and COVID-19 resources

The Australian Commission on Safety and Quality in Health Care has developed a number of resources to assist healthcare organisations, facilities and clinicians. These resources include:

- **Poster – Combined contact and droplet precautions**
<https://www.safetyandquality.gov.au/publications-and-resources/resource-library/infection-prevention-and-control-poster-combined-contact-and-droplet-precautions>

STOP **VISITOR RESTRICTIONS MAY BE IN PLACE**

For all staff

Combined contact & droplet precautions*

in addition to standard precautions

Before entering room/care zone

-  **1** Perform hand hygiene
-  **2** Put on gown
-  **3** Put on surgical mask
-  **4** Put on protective eyewear
-  **5** Wear gloves, in accordance with standard precautions

What else can you do to stop the spread of infections?

- Always change gloves and perform hand hygiene between different care activities and when gloves become soiled to prevent cross contamination of body sites
- Consider patient placement
- Minimise patient movement

At doorway prior to leaving room/care zone

-  **1** Remove and dispose of gloves if worn
-  **2** Perform hand hygiene
-  **3** Remove and dispose of gown
-  **4** Perform hand hygiene
-  **5** Remove protective eyewear
-  **6** Perform hand hygiene
-  **7** Remove and dispose of mask
-  **8** Leave the room/care zone
-  **9** Perform hand hygiene

*e.g. Acute respiratory tract infection with unknown aetiology, seasonal influenza and respiratory syncytial virus (RSV)
