Standard 2: Partnering with Consumers

Tip Sheet 8: Health literacy and the NSQHS Standards

Partnerships and health literacy

Partnerships are essential for safe and high-quality health care for individuals, and for the development of better healthcare systems. For partnerships to work effectively, everyone involved in the partnership needs to be able to give and receive, interpret and act on information. The concept of health literacy is at the core of these processes.

Improving health literacy ensures that consumers and healthcare providers can fully participate in partnerships, and that the health system and healthcare organisations are oriented to support partnerships.

This fact sheet focusses on health literacy and how your organisation can strategically address health literacy and meet the requirements of the National Safety and Quality (NSQHS) Standards.

What is health literacy?

Health literacy is about how people understand information about health and health care, and how they apply that information to their lives, use it to make decisions and act on it.

Health literacy is important because it shapes people’s health, and the safety and quality of health care.

In 2014 the Australian Commission on Safety and Quality in Health Care (the Commission) released a national statement on health literacy that was endorsed by Health Ministers. This statement separates health literacy into two parts:

- Individual health literacy is skills, knowledge, motivation and capacity of a person to access, understand, appraise and apply information to make effective decisions about health and health care, and take action.

- The health literacy environment is the infrastructure, policies, processes, materials, people and relationships which make up the health system and have an impact on the way in which people access, understand, appraise and apply health-related information and services.

Your organisation has the capacity to change the health literacy environment so that your information, systems and services are easier for consumers to understand and use. This means that it will be easier for consumers to be effective partners with your organisation.
What is the problem?

In Australia, it has been estimated that almost 60% of adults have a low level of individual health literacy. The proportion of people with low health literacy is even higher for people who speak English as a second language.

This is important as low health literacy is a barrier to good health and health care. People with low individual health literacy are between one-and-a-half and three times more likely to experience an adverse outcome. They are also more likely to be hospitalised, misunderstand medication labels or instructions, or know less about their condition than those with a higher level of health literacy.

It is difficult to estimate the economic cost of low health literacy but, a recent report by the World Health Organization proposes that it ‘significantly drain[s] human and financial resources in the health system’.

Health literacy and the NSQHS Standards

NSQHS Standard 2: Partnering with Consumers describes the requirements for engaging consumers in partnerships in the governance of a health service organisation. There are also additional actions throughout the NSQHS Standards that focus on working in partnership with consumers in their own care.

Consequently, many of the actions within the NSQHS Standards either explicitly or implicitly require consideration of the health literacy environment of your organisation.

For some actions in the NSQHS Standards, organisations need to ensure that consumers are supported to access, understand, appraise and apply the information they need to participate in a successful partnership with the service. This might mean considering the specific skills, knowledge and preferences of a patient when involving them in clinical handover (Action 6.5.1). It might also mean ensuring that consumers involved in governance processes have the knowledge they need to fully participate in meetings or other activities (Action 2.3.1).

In addition, for the actions which focus specifically on the provision of information to consumers, organisations need to ensure the information they deliver is prepared and provided in such a way that it is easy to understand and act on (such as Actions 2.4.1 and 2.4.2).

Attachment 1 includes a list of the NSQHS Standard actions that relate to health literacy, and some of the health literacy strategies that could be considered as you put systems in place to meet the NSQHS Standards. These strategies are described in more detail in the next section.
Health literacy is a complex concept and there are many different kinds of strategies and interventions that can be used to address it. These strategies overlap with activities that can be taken in areas such as patient-centred care, shared decision-making and health education. Some of the health literacy strategies and issues that you should consider when you are putting in place systems to meet the NSQHS Standards include:

- Understanding your population: to provide information that meets the needs of the people who use your health service, you need to have an understanding of who those people are. This includes understanding the diversity of the population in terms of issues such as language, cultural background and socioeconomic status. To address the needs of specific patient groups, you may need to provide information in different formats or languages.
- Providing information that is clear, focused and usable: to optimise the way in which people use the health information you provide, and improve the potential for positive outcomes, you need to provide information that is understandable and accessible for your target audience. Tip Sheet 5: Preparing written information for consumers that is clear, understandable and easy to use. This strategy relates both to information about clinical issues such as medications, as well as information about the health service that could be used by

Health literacy for clinicians

60% OF PEOPLE LOW HEALTH LITERACY

How can I help my patients understand their health better?

Know your patients
- don’t assume understanding
- talk about decisions

Consider how you present information
- listen
- try different formats
- tailor information
- decision making tools

Ensure understanding
- invite patient’s support person
- encourage questions

How can I help my patients understand their health better?
- ask patients to repeat information

Ensure understanding
- invite patient’s support person
- encourage questions

Consider how you present information
- listen
- try different formats
- tailor information
- decision making tools

Ensure understanding
- invite patient’s support person
- encourage questions

consumers participating in partnerships about governance.

• Taking a universal precautions approach to health literacy: a universal precautions approach to health literacy is based on the assumption that it is not possible to know a person’s level of individual health literacy by looking at them. Therefore, it is important to assume that there will be barriers to understanding and to reduce the complexity of information and service provided.

• Understanding the needs and preferences of individuals: while a universal precautions approach to health literacy is important, it is also important for healthcare providers to understand the needs and preferences of their patients, and to take these into account during communication. This patient-centred approach to care is associated with better safety and quality of care and better health outcomes.

• Using strategies to confirm that the information provided meets the patient’s needs: these kinds of strategies include asking people to recount the information given to them by a healthcare provider to check understanding. One well known example is ‘Teach-back’ where the healthcare provider asks the patient to state in their own words the key points in the discussion. The cycle continues until the healthcare provider is certain the key messages have been delivered and understood.
Finding out more about health literacy and how to address it

There are a range of things your organisation can do to address health literacy and meet the requirements of the NSQHS Standards.

Information about health literacy, why it is important and the strategies that are needed to address it systematically is included in the background paper\(^1\) about health literacy developed by the Commission. The nationally agreed approach to health literacy in Australia is summarised in the National Statement on Health Literacy\(^2\). The Institute of Medicine in the United States has identified ten attributes of a ‘health-literate organisation’\(^3\), which is an organisation that makes it easier for people to navigate, understand and use information and services to take care of their health.

Information about some of the strategies you can use to meet the requirements of the NSQHS Standards is outlined in the Safety and Quality Improvement Guides\(^4\), the NSQHS Standard 2 Tip Sheets\(^5\) and other supportive resources on the Commissions web site\(^6\).
